Version history

Version	Date	Author	Changes
1.0	24-Oct-2026	Yasin Jariwala	First release: read-only folder scan, dashboard, inventory, storage analysis, optional duplicates, Excel and CSV exports, scan history
1.1	24-Oct-2026	Yasin Jariwala	Folder Explorer, Where your files are, Show in folder tree, Folder Tree sheet
1.2	24-Oct-2026	Yasin Jariwala	Reopen saved scans and download their reports; seven numbered guides inside the app

10 Roadmap 7

1 Release summary

Item	Value
Product	Inventory Analyzer (Folder and File Inventory Analyzer)
Version	1.2
Release date	24-Oct-2026
Status	Ready for UAT
Source	https://github.com/yasin679/folder-file-inventory-analyzer
Platform	Any current browser; Microsoft Edge or Google Chrome for every feature. Windows desktop launcher included.

Inventory Analyzer lists every file and folder inside a folder you choose, shows how many files each folder holds and where each file is, analyzes what uses the space, and exports Excel and CSV reports. It runs entirely in the browser: nothing is installed, nothing is uploaded, and files are only read, never changed.

Version 1.2 lets you **go back to any recent scan and download its reports again**, even after closing the app, and carries its complete documentation set inside the app.

2 New in v1.2

2.1 Reopen past scans

- **Open** any of the newest 20 saved scans from **Scan History**. Every screen, the Folder Explorer and every download work as if the scan had just run. Reopened scans are labelled **Saved scan**.
- **Excel** and **CSVs** buttons on every history row download that scan's reports without opening it.
- **Open last scan** is offered on New Scan when the app starts.
- The history table was redesigned: full folder names, scan ID, start and end times, duration, and buttons that are no longer cut off.
- New setting **Keep full results of past scans on this PC** (on by default). Turn it off to keep only a summary of each scan.
- Deleting a scan also deletes its saved results. Older scans keep their summary row and show **Summary only**.

2.2 Documentation

- A full set of seven guides, each with a document ID, as Markdown (readable on GitHub) and as a formatted PDF with cover, document control, contents and page numbers:

ID	Document
IA-UG-01	User Guide, with 21 annotated screenshots

ID	Document
IA-IG-02	Installation and Administration Guide
IA-QS-03	Quick Start
IA-FAQ-04	FAQ and Troubleshooting
IA-TD-05	Technical Design
IA-UAT-06	UAT Test Cases (62 cases)
IA-RN-07	Release Notes v1.2

- **Help & Documents** in the app menu shows all seven guides with their screenshots, and downloads each as PDF. The guides work offline and travel with the app, so one file or one link carries everything.
- **New here? Read the User Guide** link on New Scan.
- Screenshots and PDFs are generated by scripts in `docs/build/`, so they can be refreshed for every release.

3 New in v1.1

Change	Where
Folder Explorer: the folder as an expandable tree, with **files here** and **in total** on every folder and each file listed under its folder	New menu item after Dashboard
Find a file or folder by name: only matches and their folders show, opened, with a match count	Folder Explorer
Where your files are: files and size per top-level folder; click one to open it in the explorer	Dashboard
📍 **Show in folder tree** on every file	File Inventory
Folder Tree sheet: the whole tree indented by level, with files here and in total	Excel (second sheet) and `folder_tree.csv`
Relative path and dot-prefixed columns	File Inventory

4 Included since v1.0

Area	Feature	PRD
Folder access	Read-only folder picker (Edge, Chrome); folder-upload fallback (Firefox, Safari); browser capability check	FR-01
Scanning	Recursive inventory in a background worker; progress, elapsed time, honest percentage and time remaining; cancel with partial results kept	FR-02, FR-11
Calculations	Direct and recursive file counts, folder counts and sizes; completeness per folder; each file counted once	FR-03

Area	Feature	PRD
Dashboard	Totals, four charts, key findings, status and error message	FR-04
File Inventory	Search; filters for extension, folder, size, date and duplicate status; sorting; paging	FR-05
Folder Summary	Direct and recursive values per folder; click through to the folder's files	FR-06
Storage Analysis	Top-N files and folders, extension summary, large files, size by depth, folders with only subfolders	FR-07
Duplicates (optional)	Size grouping, then SHA-256 confirmation; redundant bytes; unverified handling	FR-08
Exports	Excel workbook with Executive Summary and every report; CSVs and a ZIP; formula-injection protection; row-count reconciliation; sheet splitting beyond Excel's row limit	FR-09, FR-10
Errors	Categorized errors with fixes; folders that cannot be read marked unknown, never empty	FR-12
History and settings	Local scan history; remembered options	FR-13
Delivery	Single-file app, Windows desktop launcher, shared link, developer build	—

5 Fixed in v1.2

#	Issue	Fix
1	On **Storage Analysis**, the **Top N** and **Large-file threshold (MB)** boxes were squeezed into a thin strip and could not be seen or used, because the toolbar shared a style name with the progress bar. Found while capturing the screenshots for the User Guide.	The toolbar has its own style. A new end-to-end test checks both boxes are visible and change the lists.
2	The Help screen showed the open scan's name and download buttons	Hidden on Help, as on Settings and Scan History
3	Scan History cut off folder names and buttons on normal screen widths	Table redesigned; names and times wrap

5.1 Defects found by testing first (v1.0)

Defect found by the tests	Fix
Duplicates never confirmed on browsers without `Blob.arrayBuffer`	Hashing falls back to FileReader
Opening `docs` in Folder Summary also listed `docs-archive`	Exact subtree matching
Number boxes could not be cleared and retyped (typing 10 gave 110)	New number field
Declining a save showed "Export failed"	Now says "Save cancelled"
Scan History lacked scan ID and completion time	Columns added
Page buttons had no accessible names	Labels added for screen readers

Defect found by the tests	Fix
The CSV ZIP could fill with empty entries	Data normalized before zipping

6 Verified results

Test	Result
Automated tests: 42 unit, 47 UI scenarios, 9 end-to-end in Chromium	98 of 98 pass; about 97% of statements covered
User scenarios S01 to S44 (each written as a failing test first)	All pass
Sample folder: 318 files, 27 folders, 1 denied folder	Counts, sizes, empty folders, error and 2 duplicate groups exactly as designed
Large scan: 26,160 files in 22,000 folders	Scanned; reopened from history after a page reload in 0.4 s; Excel rebuilt from history in 6.2 s
Excel and CSV downloads reopened by the tests	Every sheet's rows match the scan; formula-like names stay text
Network watch during scan and export	No request leaves the page
Phone width (390 px)	No sideways scrolling on any screen

7 Changes that affect upgrades from v1.0 and v1.1

Change	Effect	What to do
History database upgraded to version 2	Happens automatically on first start; all existing scan summaries are kept	None
Scans made before v1.2	Only their summary was stored, so they show **Summary only** and cannot be reopened	Scan those folders again once
Full results now stored in the browser	File and folder names, paths, sizes and dates of the newest 20 scans are kept on the PC	Turn off **Keep full results** in Settings if this is not wanted
Guides replaced	The earlier three guides (User Guide, Setup and Administration Guide, Release Notes, with Word copies) are replaced by the seven numbered guides, as Markdown and PDF	Use the new PDFs in `docs/pdf/`
Two open versions	An older version open in another tab blocks the history upgrade, with a message	Close other Inventory Analyzer tabs

8 Known issues and limitations

#	Item	Workaround or plan
1	Upload mode cannot see empty folders	Use Edge or Chrome with **Choose folder...**
2	The shared link's hosting page may block the folder picker	Use **Upload a folder...**, or the desktop launcher
3	The whole inventory is held in memory; a few hundred thousand files is the practical limit on a typical laptop	Scan large trees in parts; streaming to storage is on the roadmap
4	Browsers expose only last-modified dates, no full paths, no created or accessed dates, no hidden attribute	By design; nothing is guessed
5	Sizes are logical file sizes, not space used on disk	Compare with Explorer's **Size**, not "Size on disk"
6	Duplicate hashing reads each candidate file whole; files above the hashing limit are unverified	Raise the limit in Settings when needed
7	Each way of opening the app keeps its own history; browsers may clear it	Keep the Excel reports you need
8	End-to-end tests run in Chromium only; the native folder picker was tested with a stand-in	Run the UAT cases (IA-UAT-06) in your browsers

9 Installation notes

- New installation: follow the Installation and Administration Guide (IA-IG-02). On Windows, copy two files and double-click the launcher.
- Upgrade: replace `Inventory Analyzer.html`. History and settings are kept.
- Shared link: the owner must set **Share > Anyone with the link** before others can open it.

10 Roadmap

Item	Planned
Scan comparison	What changed between two scans: new, removed, grown and moved files
Very large folders	Streaming inventories to local storage instead of memory; virtualized tables
Browsers	End-to-end tests in Firefox and Safari
Reports	Optional PDF summary report
